Columbia, SC 29200

Re: Bluff Road Chemical Storage Site

Dear Mr. McClure:

This is to advise you that after an investigation by representatives of this Department, the conditions which now exist at the Bluff Road chemical storage site constitute an immediate public health nuisance as defined in the enclosed "Rules and Regulations Defining Nuisances." Refer specifically to Sections 1.(h) and 1.(i) of these regulations.

You are instructed to take the following steps:

1. All containers which contain Thionyl Chloride, Phosphorus Oxychloride, or other unstable compounds must be located and the material transferred to new containers approved for use immediately.
2. After transfer to new containers, the above material and all contaminated containers must be transported to an approved disposal site, neutralized and buried. This must be completed by November 3, 1977.
3. An inventory and inspection of all other materials located at the Bluff Road site and the Shop Road sites shall be completed and sent to this office. Any materials in containers of questionable condition shall be transferred to new containers. All material shall be containerized, stored, and disposed of by methods approved by the Department of Health and Environmental Control.

A schedule for completion of item 3., suitable to this office must be provided within ten (10) days of the date of this letter. Failure to comply with the requirements of this notice will give me no choice but to seek enforcement action to remedy this situation.

Sincerely,

Hartsill W. Truesdale, P.E., Director
Solid Waste Management Division
